***Additional Prior Art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kasamoto US 4,901,091 teaches providing a groove section (21 or 24) between an inkjet head and driving unit for the head and providing a sealing member in the groove to prevent ink emitted from the nozzles of the head from flowing to the drive circuitry. However the groove section is taught to be formed parallel to the nozzle face rather than to extend from the nozzle face to the driving circuit and no temperature sensor within the groove is taught.

Kneezel et al. US 4,980,702 teaches forming a temperature sensor in a recess of a base board for an inkjet head. Kneezel et al. fails to disclose the use of a sealing member in the recess or extending the recess from the inkjet head to a driving circuit.

**REASONS FOR ALLOWANCE**

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the indication of the allowability of claims 1-9 is the inclusion therein, in combination as currently claimed, of the limitation that the groove section, in which the temperature measuring section is positioned and the sealing member is installed, is provided in the base board and extending from the nozzle face of the inkjet head to the driving circuit. This limitation is found in claims 1-9 and is neither disclosed nor taught by the prior art of record, alone or in combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
